Skaggs Springs April 1911

Skaggs Springs
April 16-20 1911

Fine Sunny weather all the time
Thamnophis common along the
creek and road following creek.
Desmokyphus fairly common in quiet
pools and puddles in creek bed.
Rana boylei common but nearly
all small. Saw a pair breeding
in shallow pool in creek bed.
♂ resting on top of ♀ clutching with
both front legs around body of ♀ just
back of shoulders. Both were
sitting perfectly still at bottom of
shallow pool. Found them mostly
in shallow pools in creek bed
but some few in main stream.
Sceloporus very common along
fences and old wood piles both
in valleys & outtop of hills.
Gerrhonotus not very common
although excellent country for
them. Collected a few both

on hillsides and in valley. Euneces
fairly common but very wild.
Saw quite a number running
along bank at the roadside in hot
sun. Very difficult to catch as they
would run into holes & crevices in
the bank. Even putting them into
alcohol at once it was hard to
keep them from breaking their
tails. Saw two *Boscainia* but
missed one, also missed one
gopher snake the only one seen.
Took 3 *Diadophis* one found dead
on road. Found it poor for Salamanders
only getting a few *Ambystoma* and
one *Batrachoseps*. All under old
oak stumps on hillsides far
from any running streams.
Toads were fairly common, took
several in flower garden around
hotel. Took a few *Hyla* around
Creek bed were not very
common and heard few at night.

April 23/11

Stuck in U bid - Chest of alcohol
gone astray - Lost somewhere
in freight sled. Surrounding
Country very green and snow
on adjacent mountains. Took
a huff and went out to
look at the Country. Took
a few *Trematylus* in Creek
about all I saw (Saw) Saw
a few *Sceloporus*. *Rattus* are
reported common about
July in some parts of the
mountains & saw quite a
few skins hung up in shop
windows. Started April 28 on
Mendocino Stage towards
Comptche. Got off about 1 1/2
miles east of Comptche, about
the center of the redwood
belt. Weather cold rainy & foggy
bum for working. Would be
good Country in hot weather

Saw a great many *Terriviviparus*
 crossing road and crawling
 up the bank. Stage driver says
 this is a sign of rainy weather
 & as soon as it clears up and
 the sun comes out they all
 head for the creek again. Driver
 reported *Serranotus* common
 on the roads and also a very
 red poisonous lizard very common
 I suppose he means *Plethodon*.

Summary for 1911

Very good

July 11

At 10:30 AM. I went to
 Assholes. I found some
 water swimming around
 long and jumped
 of the pond with
 They swim slowly
 a toad. There
 ones seen and some of
 in about a dozen
 Always the way I found them
 side of the pond in 6-7 ft

Collected 5
 from the pond. They look
 like the ones I found
 Howell and I found
 and large ones of the same

Larger than the E. in the
and fossils were 20 specimens
and several were found &
longer than.
